

<p>I am</p> <p>an agriculturalist. I adhere to organic farming standards.</p>	<p>I'm trying to</p> <p>improve my yield organically.</p>	<p>But</p> <p>I'm unable to choose fertilizers based on the nutrients required</p>	<p>Because</p> <p>I don't have any technical support to suggest fertilizers.</p>	<p>Which makes me feel</p> <p>I should get recommendations for each type of plant for better results.</p>
<p>I am</p> <p>a cultivator. My crops have been infected lately.</p>	<p>I'm trying to</p> <p>figure out the disease that affects my crops</p>	<p>But</p> <p>without identifying the disease I'm unable to save my crops</p>	<p>Because</p> <p>I lack knowledge on plant diseases</p>	<p>Which makes me feel</p> <p>completely helpless and I'll be in a debt without proper yield.</p>
<p>I am</p> <p>a gardener. Few plants are having abnormal appearance.</p>	<p>I'm trying to</p> <p>identify the reason for such abnormality</p>	<p>But</p> <p>I'm unable to identify the root cause</p>	<p>Because</p> <p>the plants die within few hours after appearing certain way</p>	<p>Which makes me feel</p> <p>that I need to identify it to prevent the same abnormality in my future plants.</p>
<p>I am</p> <p>a plant pathologist. I study plant diseases.</p>	<p>I'm trying to</p> <p>diagnose the disease looking at the images alone.</p>	<p>But</p> <p>I need a system which can predict plant diseases using images</p>	<p>Because</p> <p>being new to the job, I need to ensure my predictions are right</p>	<p>Which makes me feel</p> <p>only with more practice will I be able to predict precisely.</p>
